

Retirement Planning Made Easy !

Many people will now spend 20 - 30 years or more in retirement and the sad fact is that most have no idea what it takes to survive, financially, throughout that period of their lives. Many people don't know **when** they will be financially able to retire, or **what** to expect throughout the entire period of retirement with regards to their individual financial picture.

Would you like to know...

1. How much income you need (want) during retirement?
2. Where that income is going to come from and how is it likely to change?
3. If your money will last as long as you do, when taking into consideration such items as inflation, cost of living adjustments, market fluctuations, etc.?
4. What other changes you need to be prepared for and what the impact of those changes will be?
5. How much risk is prudent and what investment alternatives are available that will give you guarantees and a reasonable return on your money?
6. What the impact on the survivor's income is at the first person's death?
If your retirement plan includes a monthly income option, is it economically to your Benefit to choose the survivor's income at the first person's death?
7. If you are not financially ready to retire, but are burned out in your present career, what realistic alternatives do you have?
8. If it's truly necessary to purchase insurance to prepare for the possibility of the cost of a long-term care facility?

Our **Retirement Analyzer** is unique software that provides the answers to those questions, and many others, not only before retirement, but for 35 years beyond. **This program is obviously much more than just giving advice on how or where to invest your monies! This is a comprehensive, complete overview of your entire retirement picture and provides ALL the pieces to the retirement puzzle.**

Are you failing to plan or planning to fail?

Call today and allow us to help you plan for that successful retirement.
